

# Standard STEEL PLATES & GRINDING SERVICE

## STEEL PLATE WAREHOUSE AND CUSTOM GRINDING SERVICE

Standard Die Supply offers one of the most complete and up to date steel warehouse facilities in the midwest. With only one call you can order your steel plate from over 30 thicknesses, then send us a drawing and we can, torch cut, normalize, grind (Blanchard or surface), drill, mill, bore, and tap your plate to suit your specific requirements.

In short, Standard Die Supply is truly a one stop steel service center. We will save you both time and money when you let us furnish your steel plate needs.

## STANDARD 1020 CARBON HOT ROLLED STEEL PLATE

Our Standard Grade of 1020 Hot Rolled Mild Steel Plate is ideal for die sets or bolster plates. It is available from stock in over 20 sizes from 1/2" up to 6 1/8" thick. In all there are over 80 sizes of steel plate available to meet your requirements.

Another special feature of the inventory of steel plate that Standard carries is that we stock all plate in 1/8" increments over the nominal thickness. This can save you money when your requirement is to furnish on the nominal dimension.

## STANDARD #2 STEEL PLATE

Standard's #2 Steel is 4130. #2 steel plate is supplied pre-heat treated to BHN (269-321). This is a high strength, free machining steel ideal for holder blocks, clamping plates, and support plates in dies and molds.

Standard's #2 Steel has special properties which allow it to be burned rather than sawed. This process does not affect the hardness and can save you machine time by letting us burn your slug holes and special shapes.

Our stock of #2 Steel Plate is available in 1/2" increments from 1 1/8" thru 5 1/8" and is also available in 6 1/8" and 7 1/8" thickness.
