STRAIGHT GUIDE POSTS #AP1

Lamina's Precision Guide Posts (AP1) for ball bearing assemblies are made from chrome alloy steel, hardened to provide maximum protection against tracking and accelerated wear.

Ground to a high degree of tolerance accuracy that also provides a smooth hard wearing surface to assure free rolling of balls to maintain constant, predictable preload and complete interchangeability, not only with our own but other manufacturers' also.

Boring instructions for press fit are provided in this catalog.

Note: Guide posts are 1/8" shorter than nominal.
