*My World of Manufacturing*

**SDF products are excellent for progressive die applications**

**SDF products are EP additives for deep draw operations**

## High Performance Stamping & Drawing Fluids From A Metalworking Leader

Cincinnati Milacron has served the metalworking industry with quality products for over a century. Initially, by manufacturing machine tools and metalworking systems, and later by pioneering safer and less expensive alternatives to straight oil machining and grinding fluids, Milacron has remained a leader by continually answering the industry's call for product innovation.

Our MILFORM line of water-soluble stamping and drawing fluids upholds Milacron's high standard of quality for a variety of metalforming applications. MILFORM fluids provide users with proven lubricity, superior cooling, and excellent corrosion control while making part cleaning easy and efficient. In addition, all MILFORM formulations have been developed with product safety as a primary objective.
